Aim...

Overview on the references Problem to be solved and discretization parameters Finite element discretization Formulation of a fully implicit discretization scheme Some known error estimates New error estimate Proof of the new $W^{1,\infty}(\mathbb{L}^{2})$ -error estimate Conclusion and perspectives

We consider a conforming finite element method in which the discretization in time is performed using the Crank-Nicolson method for the non stationary heat equation (as a model for parabolic equations). We provide an error estimate in $W^{1,\infty}(L^2)$ -norm. This error estimate seems not to be present in the existing literature.

Aim... Overview on the references Problem to be solved and discretization parameters Finite element discretization Formulation of a fully implicit discretization scheme Some known error estimates New error estimate Proof of the new $W^{1,\infty}(\mathbb{L}^2)$ -error estimate Conclusion and perspectives

Discretization of initial conditions

The discretization of the initial condition (2), $u(x, 0) = u^0(x)$ is performed using the orthogonal projection : Find $u_h^0 \in \mathcal{V}_0^h$ such that

$$\mathbf{a}(u_h^0, \mathbf{v}) = -\left(\Delta u^0, \mathbf{v}\right)_{\mathbb{L}^2(\Omega)} = \mathbf{a}(u^0, \mathbf{v}), \ \forall \mathbf{v} \in \mathcal{V}_0^h. \tag{4}$$

where $\mathbf{a}(\cdot, \cdot)$ denotes the bilinear form defined for all $(u, v) \in H^1(\Omega) \times H^1(\Omega)$ by

$$\mathbf{a}(u,v) = \int_{\Omega} \nabla u(x) \cdot \nabla v(x) dx.$$

Discretization of the heat equation

The discretization of the heat equation (1), $u_t - \Delta u = f$ is performed as : for any $n \in [[0, M]]$, find $u_h^n \in \mathcal{V}_0^h$ such that, for all $v \in \mathcal{V}_0^h$

$$\left(\partial^{1} u_{h}^{n+1}, v\right)_{\mathbb{L}^{2}(\Omega)} + \mathbf{a}\left(u_{h}^{n+\frac{1}{2}}, v\right) = \left(\frac{1}{\tau} \int_{t_{n}}^{t_{n+1}} f(t) dt, v\right)_{\mathbb{L}^{2}(\Omega)}, \quad (5)$$

where

$$\partial^1 v^{n+1} = \frac{v^{n+1} - v^n}{k}$$
 and $v^{n-\frac{1}{2}} = \frac{v^n + v^{n-1}}{2}$. (6)

²)–error estimate

Throughout this talk, the notation C stands for a positive constant which is independent of the parameters of the discretization.

 $\mathbb{L}^{\infty}(\mathbb{L}^2)$ -error estimate. Under some regularity assumption on the data and on the exact solution, the following $\mathbb{L}^{\infty}(\mathbb{L}^2)$ -error estimate holds, see the books of Quarteroni and Valli (2008) and Raviart and Thomas (1983), for all $n \in [\![0, M+1]\!]$:

$$\| u_h^n - u(t_n) \|_{\mathbb{L}^2(\Omega)} \le C(h^{k+1} + \tau^2).$$
(7)

ir-logo

Aim... Overview on the references Problem to be solved and discretization parameters Finite element discretization Formulation of a fully implicit discretization scheme Some known error estimates New error estimate Proof of the new $W^{1,\infty} (\mathbb{L}^2)$ -peror estimate Conclusion and perspectives

Some known error estimates: $\mathbb{L}^2(H^1)$ -error estimate

 $\mathbb{L}^{2}(H^{1})$ -error estimate. Under some regularity assumption on the data and on the exact solution, the following $\mathbb{L}^{2}(H^{1})$ -error estimate holds, see the article of Burman (2011), for all $n \in [0, M + 1]$:

$$\left(\sum_{n=0}^{M} \tau \| \boldsymbol{e}_{h}^{n+\frac{1}{2}} \|_{H^{1}(\Omega)}^{2}\right)^{\frac{1}{2}} \leq C(h^{k} + \tau^{2}).$$

 $\label{eq:response} \begin{array}{c} \text{Aim...}\\ \text{Overview on the references}\\ \text{Problem to be solved and discretization parameters}\\ \text{Finite element discretization}\\ \text{Formulation of a fully implicit discretization scheme}\\ \text{Some known error estimate}\\ \text{New error estimate}\\ \text{Proof of the new $W^{1,\infty}(\mathbb{L}^2)$-error estimate}\\ \text{Conclusion and perspectives} \end{array}$

New error estimate: $W^{1,\infty}(\mathbb{L}^2)$ -error estimate

 $W^{1,\infty}(\mathbb{L}^2)$ -error estimate. Under some regularity assumption on the data and on the exact solution, the following $W^{1,\infty}(\mathbb{L}^2)$ -error estimate holds, for all $n \in [\![0, M]\!]$:

$$\|\partial^{1}\left(u_{h}^{n+1}-u(t_{n+1})\right)\|_{\mathbb{L}^{2}(\Omega)} \leq C(h^{k+1}+\tau^{2}),$$
(9)

where ∂^1 is the discrete time derivative

$$\partial^1 v^{n+1} = \frac{v^{n+1} - v^n}{k}.$$
 (10)

Aim... Overview on the references Problem to be solved and discretization parameters Finite element discretization Formulation of a fully implicit discretization scheme Some known error estimates New error estimate Proof of the new W^{1} . $^{\infty}(\mathbb{L}^{2})$ —error estimate Conclusion and perspectives

An application of the new error estimate: approximation of the first time derivative

 $\partial^1 u_h^{n+1}$ approximates the time derivative of u at $t_{\frac{n+1}{2}}$, i.e. $u_t(t_{\frac{n+1}{2}})$, by order $h^{k+1} + \tau^2$ in $\mathbb{L}^{\infty}(\mathbb{L}^2)$ - norm, where $t_{\frac{n+1}{2}} = (t_{n+1} + t_n)/2$.

An a priori estimate

Lemma

Assume that there exits $(\eta_h^n)_{n=0}^{M+1} \in (\mathcal{V}_0^h)^{M+2}$ such that $\eta_h^0 = 0$ and for all $n \in [\![0, M]\!]$

$$\left(\partial^{1} \eta_{h}^{n+1}, \boldsymbol{v}\right)_{\mathbb{L}^{2}(\Omega)} + \mathbf{a}\left(\eta_{h}^{n+\frac{1}{2}}, \boldsymbol{v}\right) = \left(\gamma^{n}, \boldsymbol{v}\right)_{\mathbb{L}^{2}(\Omega)}, \ \forall \, \boldsymbol{v} \in \mathcal{V}_{0}^{h}.$$
(11)

Then the following estimate holds:

$$\|\partial^{1}\eta_{h}^{n}\|_{\mathbb{L}^{2}(\Omega)} \leq C(\gamma + \bar{\gamma}), \quad \forall n \in [[1, M + 1]],$$
(12)

where

$$\gamma = \max_{n=0}^{M} \|\gamma^{n}\|_{\mathbb{L}^{2}(\Omega)} \text{ and } \bar{\gamma} = \max_{n=1}^{M} \|\partial^{1}\gamma^{n}\|_{\mathbb{L}^{2}(\Omega)}.$$
(13)

 $\label{eq:constraint} \begin{array}{c} Aim...\\ Overview on the references\\ Problem to be solved and discretization parameters\\ Finite element discretization$ Formulation of a fully implicit discretization schemeSome known error estimatesNew error estimate $Proof of the new <math>W^{1,\infty}(t^2)$ -error estimate Conclusion and perspectives

Idea on the proof of Lemma 1

First step: Estimate on $\partial^1 \eta_h^{j+1}$, $j \in [\![1, M]\!]$. Acting the discrete operator ∂^1 on (11) to get, for all $n \in [\![1, M]\!]$

$$\left(\partial^2 \eta_h^{n+1}, \boldsymbol{v}\right)_{\mathbb{L}^2(\Omega)} + \mathbf{a}(\partial^1 \eta_h^{n+\frac{1}{2}}, \boldsymbol{v}) = \left(\partial^1 \gamma^n, \, \boldsymbol{v}\right)_{\mathbb{L}^2(\Omega)}.$$
(14)

Taking $v = \partial^1 \eta_h^{n+1} + \partial^1 \eta_h^n$ in (14) to get

$$\begin{split} \|\partial^{1} \eta_{h}^{n+1}\|_{\mathbb{L}^{2}(\Omega)}^{2} & - \|\partial^{1} \eta_{h}^{n}\|_{\mathbb{L}^{2}(\Omega)}^{2} + \frac{\tau}{2} \left|\partial^{1} \left(\eta_{h}^{n+1} + \eta_{h}^{n}\right)\right|_{1,\Omega}^{2} \\ & = \tau \left(\partial^{1} \gamma^{n}, \, \partial^{1} \left(\eta_{h}^{n+1} + \eta_{h}^{n}\right)\right)_{\mathbb{L}^{2}(\Omega)}. \end{split}$$

Summing the previous equality over $n \in [\![1, j]\!]$, where $j \in [\![1, M]\!]$ and using some technical steps with a discrete Poincaré inequality yields

$$\|\partial^{1} \eta_{h}^{j+1}\|_{\mathbb{L}^{2}(\Omega)}^{2} \leq \|\partial^{1} \eta_{h}^{1}\|_{\mathbb{L}^{2}(\Omega)}^{2} + 4T (C_{\rho})^{2} (\bar{\gamma})^{2}.$$
(15)

(日)

 $\label{eq:problem} \begin{array}{l} \text{Aim...}\\ \text{Overview on the references}\\ \text{Problem to be solved and discretization parameters}\\ \text{Finite element discretization}\\ \text{Formulation of a fully implicit discretization scheme}\\ \text{Some known error estimates}\\ \text{New error estimate}\\ \text{Proof of the new $W^{1,\infty}(\mathbb{L}^2)$-error estimate}\\ \text{Conclusion and perspectives} \end{array}$

Idea on the proof of Lemma 1 (Suite)

Second step: Estimate on $\partial^1 \eta_h^j$. Taking n = 0 in (11) to get (note that $\eta_h^0 = 0$)

$$\left(\partial^{1} \eta_{h}^{1}, v\right)_{\mathbb{L}^{2}(\Omega)} + \frac{1}{2}\mathbf{a}(\eta_{h}^{1}, v) = \left(\gamma^{0}, v\right)_{\mathbb{L}^{2}(\Omega)}$$

Taking $v = \partial^1 \eta_h^1$ in the previous equality and using some technical steps leads to

$$\|\partial^1 \eta_h^1\|_{\mathbb{L}^2(\Omega)} \le \gamma. \tag{16}$$

(日)

This with (15) implies the desired estimate of Lemma 1.

Aim... Overview on the references Problem to be solved and discretization parameters Finite element discretization Formulation of a fully implicit discretization scheme Some known error estimates New error estimate Proof of the new $W^{1,\infty}(\mathbb{L}^2)$ -error estimate Conclusion and perspectives

Idea on the proof of the new $W^{1,\infty}(\mathbb{L}^2)$ -error estimate

The proof of the new $W^{1,\infty}(\mathbb{L}^2)$ -error estimate is based essentially on the comparison with the following finite element scheme: For each $n \in [\![0, M+1]\!]$, we compute $\overline{u}_n^n \in \mathcal{V}_0^h$ such that

$$\mathbf{a}(\bar{u}_h^n, \mathbf{v}) = -\left(\Delta u(t_n), \ \mathbf{v}\right)_{\mathbb{L}^2(\Omega)} = \mathbf{a}(u(t_n), \mathbf{v}), \ \forall \ \mathbf{v} \in \mathcal{V}_0^h. \tag{17}$$

The following convergence result can be shown using the classical error estimates in finite element methods

$$\left|\bar{u}_{h}^{n}-u(t_{n})\right|_{1,\Omega}\leq Ch^{k},$$
(18)

and, for all $j \in \{1, 2\}$

$$\|\partial^{j}\bar{u}_{h}^{n}-\partial^{j}u(t_{n})\|_{\mathbb{L}^{2}(\Omega)}\leq Ch^{k+1}.$$
(19)

 $\begin{array}{c} {\rm Aim...}\\ {\rm Overview \ on \ the \ references}\\ {\rm Problem \ to \ be \ solved \ and \ discretization \ parameters \ Finite \ element \ discretization \ solved \ rot \ retization \ solved \ rot \ rot \ estimates \ New \ error \ estimates \ New \ error \ estimate \ Proof \ of \ the \ new \ W^1, \infty (1^2) \ error \ estimate \ Conclusion \ and \ perspectives \end{array}$

Idea on the proof of the new $W^{1,\infty}(\mathbb{L}^2)$ -error estimate (Suite)

We write the error between the exact solution u and its finite element approximate solution as

$$u(t_n) - u_h^n = \left(u(t_n) - \overline{u}_h^n \right) + \left(\overline{u}_h^n - u_h^n \right) .$$
⁽²⁰⁾

The error $(u(t_n) - \bar{u}_h^n)$ is already estimated in (17)–(18). It remains now to estimate $\eta_h^n =: \bar{u}_h^n - u_h^n$. Using the schemes satisfied by \bar{u}_h^n and u_h^n , we get

$$\left(\partial^{1}\eta_{h}^{n+1},\boldsymbol{v}\right)_{\mathbb{L}^{2}(\Omega)}+\boldsymbol{a}\left(\eta_{h}^{n+\frac{1}{2}},\boldsymbol{v}\right)=\left(\mathbb{K}^{n,1}-\mathbb{K}^{n,2},\boldsymbol{v}\right)_{\mathbb{L}^{2}(\Omega)},$$
(21)

where

$$\mathbb{K}^{n,1} = -\partial^1 \left(u(t_{n+1}) - \bar{u}_n^{n+1} \right) \text{ and } \mathbb{K}^{n,2} = -\frac{1}{\tau} \int_{t_n}^{t_{n+1}} \Delta u(t) dt + \frac{\Delta u(t_{n+1}) + \Delta u(t_n)}{2} dt$$

< ロ > < 同 > < 回 > < 回 > .

 $\label{eq:constraint} \begin{array}{c} \text{Aim...}\\ \text{Overview on the references}\\ \text{Problem to be solved and discretization parameters}\\ \text{Finite element discretization}\\ \text{Formulation of a fully implicit discretization scheme}\\ \text{Some known error estimate}\\ \text{New error estimate}\\ \text{Proof of the new $W^{1,\infty}(t^2_{-})$-error estimate}\\ \text{Conclusion and perspectives} \end{array}$

Idea on the proof of the new $W^{1,\infty}(\mathbb{L}^2)$ -error estimate (Suite)

Recall that

$$\left(\partial^{1}\eta_{h}^{n+1},\boldsymbol{v}\right)_{\mathbb{L}^{2}(\Omega)}+\boldsymbol{a}\left(\eta_{h}^{n+\frac{1}{2}},\boldsymbol{v}\right)=\left(\mathbb{K}^{n,1}-\mathbb{K}^{n,2},\boldsymbol{v}\right)_{\mathbb{L}^{2}(\Omega)}.$$
(22)

Using Lemma 1 to obtain

$$\|\partial^1 \eta_h^n\|_{\mathbb{L}^2(\Omega)} \le C(\gamma + \bar{\gamma}), \quad \forall n \in [[1, M + 1]],$$
(23)

where

$$\gamma = \max_{n=0}^{M} \|\mathbb{K}^{n,1} - \mathbb{K}^{n,2}\|_{\mathbb{L}^{2}(\Omega)} \text{ and } \bar{\gamma} = \max_{n=1}^{M} \|\partial^{1} \left(\mathbb{K}^{n,1} - \mathbb{K}^{n,2}\right)\|_{\mathbb{L}^{2}(\Omega)}.$$
(24)

Error estimates (17)–(18) imply that, for $j \in \{0, 1\}$

$$\|\partial^{j}\mathbb{K}^{n,1}\|_{\mathbb{L}^{2}(\Omega)} \leq Ch^{k+1}.$$
(25) where

(日)

 $\begin{array}{c} A \text{im...} \\ Overview on the references \\ Problem to be solved and discretization parameters \\ Finite element discretization$ $Formulation of a fully implicit discretization scheme \\ Some known error estimate \\ New error estimate \\ Proof of the new <math>W^{1,\infty}(\mathbb{L}^2)$ -error estimate Conclusion and perspectives \\ \end{array}

Idea on the proof of the new $W^{1,\infty}(\mathbb{L}^2)$ -error estimate (Suite)

Recall that

$$\mathbb{K}^{n,2}=-\frac{1}{\tau}\int_{t_n}^{t_{n+1}}\Delta u(t)dt+\frac{\Delta u(t_{n+1})+\Delta u(t_n)}{2}.$$

We use

$$\mathbb{K}^{n,2} = -\frac{1}{\tau} \int_0^{\tau} \left(\frac{\left(t - \frac{\tau}{2}\right)^2}{2} - \frac{\tau^2}{8} \right) \Delta u_{tt}(t + t_n) dt.$$
(26)

We can easily check that $\frac{(t - \frac{\tau}{2})^2}{2} - \frac{\tau^2}{8}$ is non–positive for $t \in [0, \tau]$ and by some elementary calculations, we get

$$\int_0^\tau \left(\frac{\left(t-\frac{\tau}{2}\right)^2}{2} - \frac{\tau^2}{8} \right) dt = -\frac{\tau^3}{12}.$$

This with allows us to get, for $j \in \{0, 1\}$

$$\|\partial^j \mathbb{K}^{n,2}\|_{\mathbb{L}^2(\Omega)} \le C au^2.$$
 (2)

Aim...Overview on the references Problem to be solved and discretization parameters Finite element discretization Formulation of a fully implicit discretization scheme Some known error estimates New error estimate Proof of the new $W^{1,\infty}(t^2)$ -error estimate Conclusion and perspectives

Idea on the proof of the new $W^{1,\infty}(\mathbb{L}^2)$ -error estimate (Suite)

Recall that

$$\gamma = \max_{n=0}^{M} \| \mathbb{K}^{n,1} - \mathbb{K}^{n,2} \|_{\mathbb{L}^{2}(\Omega)} \quad \text{and} \quad \bar{\gamma} = \max_{n=1}^{M} \| \partial^{1} \left(\mathbb{K}^{n,1} - \mathbb{K}^{n,2} \right) \|_{\mathbb{L}^{2}(\Omega)}, \quad (28)$$

and the following estimates have been obtained

$$\|\partial^{j}\mathbb{K}^{n,1}\|_{\mathbb{L}^{2}(\Omega)} \leq Ch^{k+1} \text{ and } \|\partial^{j}\mathbb{K}^{n,2}\|_{\mathbb{L}^{2}(\Omega)} \leq C\tau^{2}.$$
(29)

Consequently, with (28)

$$\|\gamma\|_{\mathbb{L}^2(\Omega)} \le Ch^{k+1}$$
 and $\|\bar{\gamma}\|_{\mathbb{L}^2(\Omega)} \le C\tau^2$. (30)

This with (23) implies that

$$\|\partial^1\eta_h^n\|_{\mathbb{L}^2(\Omega)} \leq C(h^{k+1}+\tau^2), \quad \forall n \in \llbracket 1, M+1 \rrbracket.$$

This completes the proof of new $W^{1,\infty}(L^2)$ -error estimate.

 $\label{eq:constraint} \begin{array}{c} \text{Aim...}\\ \text{Overview on the references}\\ \text{Problem to be solved and discretization parameters}\\ \text{Finite element discretization}\\ \text{Formulation of a fully implicit discretization scheme}\\ \text{Some known error estimates}\\ \text{New error estimate}\\ \text{Proof of the new $W^{1,\infty}(\underline{z}^2)$-error estimate}\\ \text{Conclusion and perspectives} \end{array}$

Conclusion

We considered the heat equation (as model), with initial and homogeneous boundary conditions in any space dimension. A new error error estimate in $W^{1,\infty}(L^2)$ -norm is derived for an implicit Crank-Nicolson finite element scheme.

Bradji, Abdallah Finite element for parabolic equations

 $\begin{array}{c} {\rm Aim...}\\ {\rm Overview \ on the references}\\ {\rm Problem \ to \ be \ solved \ and \ discretization \ parameters}\\ {\rm Finite \ element \ discretization \ parameters}\\ {\rm Finite \ element \ discretization \ scheme}\\ {\rm Some \ known \ error \ estimates}\\ {\rm New \ error \ estimates}\\ {\rm Proof \ of \ the \ new \ } {\cal W}^{1,\infty}(\mathbb{L}^2) {=} {\rm error \ estimate}\\ {\rm Conclusion \ and \ perspectives} \end{array}$

Perspectives

- Is it possible to prove a convergence in W^{1,∞}(L²)-norm under a weak-regularity ?
- Is it possible to extend the obtained error estimate to other complex equations (or systems), e.g. time dependent incompressible Navier-Stokes equations, in which heat equation is involved?
