SINGULARITY THEORY

Singularity Theory

Dedicated to Jean-Paul Brasselet
On his 60th birthday

Proceedings of the Singularity School and conference
January 24th – February 25th 2005
CIRM, Marseille, France

Introduction

The Singularity School and Conference was organized from 24 January to 25 February 2005, in the CIRM, Centre International de Rencontres Mathématiques de Luminy, Marseille, France, as a Special School of the Formation Permanente of the French CNRS. Organizers of the five weeks were successively Anne Pichon, Jean-Paul Brasselet, David Trotman, Nicolas Dutertre and Claudio Murolo, Denis Chénot. Around 200 mathematicians from 31 countries participated in this very successful event. The purpose of the event was to cover recent developments in the area and to introduce young researchers to singularities in geometry and topology.

The five weeks were organized in the following way : Elementary and advanced courses were given during the first week by high level specialists of the subject : Jean-Paul Brasselet, *Characteristic classes for Singular Varieties*; Herwig Hauser, *Basic techniques for resolution of singularities*; Anatoly Libgober, *Topology of the complements to hypersurfaces in projective space*; David Trotman, *Stratifications of subanalytic and semialgebraic sets*; Vladimir Zakalyukin, *Lagrangian and Legendrian singularities*. The second week was devoted to general lectures on singularity theory. During the third week users of singularity theory gave lectures on applications of the theory to various domains: robot manipulation, visualization techniques, medical imaging, nerve cells, resonance tongues, gravitational lensing, etc. . . . During the fourth week young researchers explained their recent results and during the last week lectures were concentrated on geometry and topology in singularity theory.

The book is a collection of courses, surveys, and new results in singularity theory and its applications, presented during the five weeks. It provides a focus for senior researchers and postgraduate students, summarizing the current main ideas in singularity theory and suggesting future research directions in the area.

The main interesting features of the papers in these Proceedings of the Singularity School and Conference are: the elementary and advanced courses in the first part of the book and the papers on applications of singularity theory in the second part, which is an original point in comparison with classical proceedings on the subject. The third part contains surveys on the development and evolution of the most important themes of the theory from the beginning up to now, and research papers on important recent results in the field. They represent the current problems under investigation in the

area and the present state of the art of the subject.

All papers published in the present book have been refereed.

The volume is complementary to the volume published by World Scientific Publishing for the School and Workshop on Singularity theory held in Trieste, 15 August - 3 September 2005.

The event was made possible with the help of the CNRS, Centre National de la Recherche Scientifique, especially the Formation Permanente of CNRS and the local institutions of the CNRS (the FRUMAM, the IML and the LATP), the CIRM, the French Ministry of Research and Technology, the French Ministry of Foreign Affairs, the Science Faculty of the Université de la Méditerranée, the Université de Provence, the City of Marseilles, and the Conseil Général des Bouches-du-Rhône. The organizers thank particularly those participants who funded themselves partially or totally .

It is a great pleasure to thank all the speakers and the participants, whose presence was the real success of the School and Conference. We are also very grateful to the staff of the IML, the LATP and the CIRM for their help in organizing the event. Finally, our thanks go to the editorial staff of World Scientific Publishers for their patience and efficient help with the publication process of the volume.

This volume is dedicated to our friend and colleague Jean-Paul Brasselet, who reached the round age of 60 in March 2005. We recall here some of his achievements, in particular his influence on research in singularities in Marseille.

Until 1991 Jean-Paul was at the University of Lille 1, directing the research laboratory from 1985 to 1991 and was instrumental in the creation and construction of a fine new library for the mathematics department. He was one of Henri Cartan's last research students, defending his Thèse d'Etat in 1977 (directed jointly by Cartan and Shih Weishu), and was also strongly influenced by Marie-Hélène Schwartz, his colleague at Lille, who had been working on extending the theory of characteristic classes to singular analytic spaces since the early 50's (and has continued to do so almost to this day - at the age of 87, she published a 216 page research monograph in the year 2000 on Chern classes for analytic spaces, and is thus an inspiration to us all !). The theory of characteristic classes for singular spaces became the dominant theme in Jean-Paul's research. His lecture notes in the present volume provide an introduction to the theory and bear witness to the longevity of his efforts and thus to the richness of the theory.

An unusual feature of his latter activity in Lille was a collaboration with the French National Railways, the SNCF, applying differential geometry to the design of TGV tracks between Paris and Lille. Before leaving for Marseille to become Director of the CIRM, and of the IML, he organised a major singularities conference in Lille with over 230 participants and traditional giant figures, and edited the proceedings in a volume published as volume 201 of the London Mathematical Society Lecture Notes.

He organised another huge singularities conference in Marseille in 1993 (around 150 participants) as well as collaborating in running regular Marseille-Nice meetings, up to 6 a year, from 1991 to 2003. Three doctoral students accompanied Jean-Paul to Marseille - Belkacem Bendiffallah, Michal Kwiecinski and Jianji Zhou. The three made entertaining speeches at the celebration dinner in Marseille in honour of Jean-Paul. The 90's saw a regular expansion of activity in singularity theory in Marseille: Jean-Paul and his students joining David Trotman with his students Laurent Noirel, Stéphane Simon, and then Claudio Murolo, Georges Comte, Dwi Juniati and Guillaume Valette. Denis Chénot arrived from Nice in 1993 and soon acquired a student in Christophe Eyral, while in 1994 Lê Dũng Tráng came from Paris with his students including Jawad Snoussi and Meral Tosun, and later Caroline Ausina and Eric Akeke. Hélène Maugendre was appointed Maître de Conférences in 1996, Anne Pichon in 1998, Claudio

Murolo in 2000 and Nicolas Dutertre in 2002. In the creation of a stimulating research environment for this group of mostly young researchers to develop and thrive, Jean-Paul played a leading role by organising many international meetings and by bringing his collaborators to Marseille for extended periods (Paolo Aluffi, Gottfried Barthel, Lev Birbrair, Karl-Heinz Fieseler, Ludger Kaup, André Legrand, Ursula Ludwig, Markus Pflaum, Jörg Schürmann, José Seade, Tatsuo Suwa and Nicolae Teleman).

Recently Jean-Paul was the French organiser of French-Japanese singularities meetings in Sapporo (1998 and 2004), and Luminy (2002), and the 8th São Carlos Singularities Workshop (in Luminy !) in 2004. He has also spent much time in Brussels as a European expert. All this activity meant he had the competence and the confidence to propose that the six of us plan the 5 Weeks of Singularity Theory which took place in January and February 2005. That the whole event went so smoothly and on such a large scale was due in great part to his experience and know-how.

All Jean-Paul's colleagues know his sociability and good humour, also his efficiency in realising ambitious projects. Let this book be a mark of our respect and appreciation and an encouragement for future researchers in singularity theory.

Denis Chénot

Marseille, October 12th, 2006

PROGRAMS

Introduction to Singularity Theory 24-28th January 2005

5 courses of 5 hours each :

Jean-Paul Brasselet, Characteristic classes of singular varieties

Herwig Hauser Basic techniques for resolution of singularities

Anatoly Libgober Topology of the complements to hypersurfaces in projective space

David Trotman Subanalytic and semialgebraic sets: stratifications, equisingularity and metric properties

Vladimir Zakalyukin Lagrangian and Legendrian singularities

Singularities
31th January - 4th February 2005

Monday 31th January

- 9:40-10:30 **Anatoly Libgober**, Topology of the complements and geometry of non normal crossings
11:00-11:50 **David Mond**, Linear free divisors and Lie groups
16:00-16:50 **Wim Veys**, Are principal value integrals birational invariants?
17:00-17:50 **Grigory Mikhalkin**, Complex, real and tropical curves

Tuesday 1st February

- 8:30-9:20 **András Némethi**, On the classification of cuspidal rational projective plane curves
9:40-10:30 **Philippe Du Bois**, Dévissage de la forme de Seifert entière des germes de courbe plane à deux branches
11:00-11:50 **Paolo Aluffi**, Celestial integration and applications
16:00-16:50 **Laurentiu Maxim**, Alexander invariants of hypersurface complements
17:00-17:50 **Anne Frühbis-Krüger**, Algorithmic resolution of singularities from a practical point of view
18:00-18:50 **Andrzej Weber**, Pure homology of singular varieties

Wednesday 2nd February

- 8:30-9:20 **Richard Rimanyi**, Thom polynomials for quivers 9:40-10:30 **László Feher**, Relations among Thom Polynomials
11:00-11:50 **Mutsuo Oka**, Zariski pairs in sextics

Thursday 3rd February

- 8:30-9:20 **Alexandru Dimca**, Idaux d'adjonction et idaux des multiplicateurs
9:40-10:30 **Michel Vaquié**, Extension de valuation et polygone de Newton
11:00-11:50 **Adam Parusinski**, Recent results on blow-analytic equivalence of analytic function germs
16:00-16:50 **Inna Scherback**, Intersections of Schubert Cells, Tensor Products of sl_n -module and Critical Points of The Generating Function
17:00-17:50 **Piotr Mormul**, Small growth vectors: a Gödel-like encoding

of the geometric classes of Goursat flags

Friday 4th February

8:30-9:20 **Lê Dung Trang** 9:40-10:30 **Fuensenta Aroca**, An extension of the Newton polyhedron construction to compute solutions of a Partial Differential Equation

11:00-11:50 **Jawad Snoussi**, The Nash modification and point blow-up on surfaces

14:00-14:50 **Andrew Du Plessis**, Projective hypersurfaces admitting a unipotent group action

Applications of Singularities
7-11th February 2005

Monday 7th February

- 10:00-10:50 **Shyuichi Izumiya**, Pseudo-spherical geometry in Minkowski space and Legendrian dualities
11:30-12:20 **Stanislaw Janeczko**, Integrable singularities of Dirac's generalized Hamiltonian dynamics
16:00-16:50 **Maria Carmen Romero-Fuster**, Generic contacts of surfaces in \mathbb{R}^5
17:00-17:50 **Hiroaki Terao**, Arrangements of hyperplanes and hypergeometric integrals
18:00-19:20 **Fernand Pelletier**, Stratifications en dimension infinie et applications

Tuesday 8th February

- 9:00-9:50 **Gert Vegter**, The Geometry of Resonance Tongues: A Singularity Theory Approach
10:00-10:50 **David Chillingworth**, Bifurcation from a 2-manifold: wave-fronts and line congruences
11:30-12:20 **Mike Field**, Singularity and stratification theory applied to dynamical systems
16:00-16:50 **Jacques Furter** Bifurcations in elasticity : gradient, symmetry breaking structures and path formulation
17:00-17:50 **Isabel Labouriau**, Synchronization and desynchronization of coupled nerve cells

Wednesday 9th February

- 9:00-9:50 **Peter Giblin**, Recent work on symmetry sets and medial axes in 2 and 3 dimensions
10:00-10:50 **André Diatta**, Vanishing inflexions and vertices in 1-parameter families of plane curves
11:30-12:20 **James Damon**, Understanding the geometry of shapes in \mathbb{R}^n via medial and skeletal structures

Thursday 10th February

- 9:00-9:50 **Ole Fogh Olsen**, Deep Structure Analysis of Images

- 10:00-10:50 **Xavier Pennec**, Statistical Computing on Riemannian Manifolds with Applications in Medical image Analysis
11:30-12:20 **Yannick Kergosien**, Singularities and genericity in Medical Imaging and Vision
16:00-16:50 **Alain Joets**, Optical singularities (caustics) as visualization technics. Application to liquid cristals
17:00-17:50 **Arlie Petters**, Singularities in gravitational lensing
18:00-19:20 **Dirk Siersma**, Shape and Morse Theory of the distance function

Friday 11th February

- 9:00-9:50 **Peter Donelan**, Singularities in Robotics
10:00-10:50 **Bernard Mourrain**, Meshing implicit algebraic surfaces
11:30-12:20 **Yosef Yomdin**, What is "Computational Singularity Theory" and what is it good for?

Young researchers in Singularities
14-18th February 2005

Monday 14th February

- 9:00-9:40 **Patrick Popescu-Pampu**, On the contact boundary of an isolated singularity
9:55-10:35 **José Ignacio Cogolludo**, Topology of real and complex line arrangements in \mathbb{CP}^2
11:00-12:20 **Dirk Siersma**, The topology of non-isolated singularities I
15:50-16:30 **Gil Guibert**, Motivic Milnor fiber and applications
17:00-17:40 **Johannes Nicaise**, Rigid geometry and the Monodromy conjecture
17:55-18:35 **Goulwen Fichou**, The corank is a blow-Nash invariant

Tuesday 15th February

- 9:00-9:40 **Didier D'Acunto**, Singularités de fonctions modérées : trajectoires de gradient et fonds de vallées
9:55-10:35 **Vincent Grandjean**, Gradient trajectories and singularity at infinity
11:00-12:20 **Walter Neumann**, Splice diagrams I
15:00-15:40 **Mariusz Zajac**, Centre symmetry sets and other affine invariants of algebraic sets
15:50-16:30 **Guillaume Valette**, Hardt's theorem : a bilipschitz version
17:00-17:40 **Rémi Soufflet**, Arc analyticity of sub-analytic functions and related topics

Wednesday 16th February

- 9:00-9:40 **Maria Alberich-Carramiñana**, Contractibility of exceptional curves
9:55-10:35 **Guillaume Rond**, Artin function and a counter-example to a conjecture of Spivakovsky
11:00-11:40 **Dmitry Kerner**, On enumeration of singular curves/hypersurfaces
11:50-12:30 **Wojciech Domitrz**, Volume-preserving diffeomorphisms on germs of singular quasi-homogeneous varieties and \mathcal{A}_Ω -equivalence of map-germs

Thursday 17th February

- 9:00-9:40 **Pedro Gonzalez-Perez**, Harnack's deformations of real plane branch singularities and their amoebas
9:55-10:35 **Romain Bondil**, Multiplicities and vertical components
11:00-12:20 **Dirk Siersma**, The topology of non-isolated singularities II
15:00-15:40 **Christian Sevenheck**, Geometry and deformation theory of lagrangian singularities
15:50-16:30 **Nero Budur**, Applications of D -modules
17:00-17:40 **Tristan Torrelli**, Logarithmic comparison theorem and D -modules
17:55-18:35 **Céline Roucairol**, Irregularity of a differential system associated to two polynomials

Friday 18th February

- 9:00-9:40 **Ricardo Uribe-Vargas**, A new projective invariant associated to special parabolic points of surfaces and to swallowtails
9:55-10:35 **Arnaud Bodin**, Topology of families of complex polynomials
11:00-12:20 **Walter Neumann**, Splice diagrams II
15:00-15:40 **Evelia Garcia-Barroso**, The Lojasiewicz numbers and plane curve singularities
15:50-16:30 **Etienne Mann**, Correspondence between the orbifold cohomology of weighted projective spaces and singularity of a Laurent polynomial

Topology and Geometry of Singularities
21-25th February 2005

Monday 21th February

- 9:40-10:30 **Alejandro Melle**, Links and analytic invariants of superisolated singularities
11:00-11:50 **Stanislaw Janeczko**, Local symplectic invariants and relative Darboux Theorem
14h30-15:20 **Sabir Gusein-Zade**, Curves on rational surface singularities and Poincaré series
16:00-16:50 **Françoise Michel**, On the boundary of the Milnor Fiber for non isolated singularities of germs of surfaces
17:10-18:00 **Anne Pichon**, Real analytic germ from a singularity of normal surface
18:20-19:10 **Terry Gaffney**, The multiplicity polar theorem, and an application to the indices of vector fields on singular spaces

Tuesday 22th February

- 8:30-9:20 **Ignacio Luengo**, Open problems on plane rational curves
9:40-10:30 **Georges Comte**, Courbes intégrales de champs lipschitz
11:00-11:50 **Nicolas Dutertre**, Curvature integrals of the real Milnor fibre
14:30-15:20 **Marcio Soares**, Singularities of logarithmic foliations
16:00-16:50 **Patrice Orro**, Some properties of the SR geodesic distance
17:10-18:00 **Clément Caubel**, Contact structure and isolated singularities : some recent results
18:20-19:10 **Lev Birbrair**, Metric Theory of Real Surfaces

Wednesday 23th February

- 8:30-9:20 **Walter Neumann**, The Casson Invariant Conjecture
9:40-10:30 **Victor Goryunov**, Simple symmetric matrix singularities and the subgroups of Weyl groups A_μ, D_μ, E_μ
11:00-11:50 **Andrew du Plessis**, Fibration, stratification and resolution

Thursday 24th February

- Special day for Jean-Paul Brasselet on his 60th Birthday*
8:30-9:20 **Shoji Yokura**, Characteristic classes of symbolic algebraic vari-

eties

9:40-10:30 **Jörg Schürman**, Motivic characteristic classes for singular spaces,

11:00-11:50 **Nicolae Teleman**, Sur le caractère de Chern

14:30-15:20 **André Legrand**, Singularités coniques isolées et caractère de Chern

16:00-16:50 **Markus Pflaum**, Towards an algebraic index theorem for symplectic orbifolds

17:15 **Concert : Anne Méhat** (violon) and **Ludger Kaup** (piano)

18:00 Apéritif

Birthday dinner

Friday 25th February

8:30-9:20 **José Seade**, Indices of vector fields on singular varieties

9:40-10:30 **Tatsuo Suwa**, Localization of characteristic classes and applications

11:00-11:50 **Lê Dung Tráng**, Equisingularité sur les surfaces

14h30-15:20 **Gottfried Barthel**, Homologie des variétés toriques

16:00-16:50 **Bernard Teissier**, Valuations and toric geometry

Proceedings of the 2005 Marseille Singularity School and Conference

SINGULARITY THEORY

The Singularity School and Conference took place in Luminy, Marseille, from January 24th to February 25th 2005. More than 180 mathematicians from over 30 countries converged to discuss recent developments in singularity theory.

The volume contains the elementary and advanced courses conducted by singularities specialists during the conference, general lectures on singularity theory, and lectures on applications of the theory to various domains. The subjects range from geometry and topology of singularities, through real and complex singularities, to applications of singularities.
